

**NEW
SOUTH**

ROW CONSTRUCTION

Temporary access roads and bridges are our core business. At New South, we start with a site walkdown to analyze site conditions and workscope to create the safest, most efficient access plan. New South crews build all kinds of roads and environmental access in any terrain you may face. In addition to constructing temporary access roads and bridges, we are known as the best wetland access contractor in the industry.

First ones on site and last ones off, New South prepares the right of way for access. Our crews clear the ROW and install culverts, stone entrances and all SWPPP environmental services. At the end of your project, we provide full ROW restoration, leaving the site better than we found it. New South has you covered with single source access synchronizing with pipeline crews from start to finish. Projects run smoother and more efficiently when you bundle New South services.

WETLAND ACCESS EXPERTS

Keep your crews safe while protecting wetlands. Utility companies don't have to damage wetlands in order to gain access to their right of ways, so why not take the path that will ensure both? New South is the leading provider of wetland access. Our crews lay engineered systems that float on vegetative wetlands, protecting native plants and habitats. New South's wetland experts walk wetlands to determine the best installation and removal strategy. Our crews are experienced and masterful at removing all mats at the end of your project, minimizing potential fines and penalties.

FIRST ONES IN, LAST ONES OUT

New South offers a full line of civil construction services for pipeline right of ways. Our crews are the first ones on site, building culverts and stone entrances to pave a safe path for equipment and crews to clear the right of way for temporary roadways. In addition, we provide a complete array of environmental services to prevent stormwater pollution. At the end of your project, our right of way restoration crews will grade and seed your project site and leave it better than we found it.
